

Spot Launches New Hosting and SaaS Venture - Hum Technology

Hum offers its clients a full range of hosting services and web-based software

For Immediate Release

Vancouver, BC— October 18, 2008 — Spot Solutions Ltd. (www.spotsolutions.com), a prominent custom software development and support firm, announced today the launching of its new hosting venture, Hum Technology. Over the years, Spot's clients have asked it to host various applications, servers and websites. With no marketing or proactive sales tactics, Spot's hosting business grew into a significant entity in its own right, and decided to let the hosting business stand on its own.

Hum Technology will specialize in delivering hosted versions of Microsoft collaboration and communication technologies, Exchange and SharePoint, as well as hosting websites, databases, servers and applications. Hum will also productize successful Spot software applications and market them as web-based software to HR and Communication professionals. Spot President, Cy Naumenko, comments, "We're glad to be actively growing our hosting business so we can give our existing client-base even better support and a more robust network infrastructure." Hum will also proactively market its range of services to British Columbia small-to-medium organizations.

About Spot Solutions
